

Release Notes for Palermo

- **OE**
 - **Document Display**
 - Closing the Document Display will result in a “Record already locked by this season” prompt and give an access violation error message if the user first tried to open the order and received the message that the invoice “must be preposted before order can be updated” message.
 - ✓ Changes have been made in the programming that keep the software from going into edit mode when the docdisplay is opened.

- **AR**
 - **Printing payment batches**
 - The software informs a user to “Post all OE Invoice batches before printing Payments” if there are unposted invoice batches. However, if the user clicks OK, the software will proceed to the View/Print/Setup screen. Attempting to view or print this results in a “Cannot perform this operation on a closed dataset” error message.
 - ✓ Validation has been added to prevent the user from being able to view or print the payments as long as the invoice batches have not been posted.
 - **Printing invoice batches**
 - When a user tries to print the Invoice Batch Journal, they cannot choose between Selective or All because the system takes the user to the Select Batch screen automatically.
 - ✓ The functionality has been modified so that the ‘All’ selection works the way it was intended to.
